

I am writing in response to the modification iGT005 raised by Scottish Power, to advise that British Gas fully supports this modification proposal to be implemented in time for the AQ Review in 2007.

We believe that bringing the iGT AQ Review in line with the AQ Review carried out by the rest of the industry will improve the accuracy of the Aqs held for each meter point, as the current rules restrict the number of meter points where a new accurate AQ is calculated each year. This move will ensure a more efficient and accurate AQ Review.

Kind Regards

Mayu Butchart
British Gas
